STIHL

With this battery charging cabinet, you'll no longer need to worry about whether your batteries are fully charged each morning, because the cabinet automatically controls the charging of all connected batteries to ensure that work can start straight away each day. More time and less coordination effort when it matters.

NO ELECTRICAL INSTALLATION REQUIRED

Commissioning your battery charging cabinet is incredibly straightforward and does not require any expert knowledge: simply plug in the mains connector and start charging.

CHARGE UP TO 20 BATTERIES SIMULTANEOUSLY

The charging cabinet has five drawers. Each drawer accommodates a maximum of four STIHL AP batteries or one STIHL AR backpack battery for charging. Existing STIHL chargers are easy to integrate.

SMART CHARGE MANAGEMENT

The charging cabinet control system monitors the battery charging process and manages it on a cyclical basis. This means that all batteries in the cabinet can be fully charged from a normal mains socket (230 V or 400 V) in 12 hours.

TECHNICAL DATA	1 PHASE	3 PHASES
Rated voltage	230 - 240 V AC + 10 %	400 V AC + 10 %
Rated frequency	50 Hz
