Greener, healthier: STIHL sprayers and mistblowers
Whether you’re a weekend gardener or a professional operator, STIHL has the right tool for every pest management and plant care task. With the right accessories on hand, STIHL sprayers and mistblowers can tackle all kinds of tasks, from weed control in flower beds and pest control in vineyards. Operation is as simple and comfortable as you are used to, and the results are impressive. STIHL sprayers and mistblowers are a labour-saving way to help protect your plants.

Sprayer or mistblower?
This will depend on what plants and areas you want to work with. The following pages will help you easily identify the right tool for your needs.
For homes, gardens and businesses
Applications: potted plants and container planting, young plants and seedlings, vegetable and flower beds, small shrubs and trees

- Precise treatment of low-growing plants as well as of individual, more delicate plants
- The liquid is brought under pressure by pumping, and is sprayed out through a nozzle
- For use inside and outside: around the house, in the garden, for medium-high planting (beds) and in greenhouses
- For applying fluids*
- Suitable for weed control, due to minimal spray drift (jet spray)

You will find the right STIHL sprayer for your needs starting on page 6.

* Pesticides, plant strengtheners, fertilisers
STIHL mistblowers

Applications: tall vegetable crops, vines, shrubs, trees

- **Treatment of tall plants** with thick foliage
- **Petrol engine** causes blower to spin, creating an air stream. Leaves are stirred up. Liquid is dispensed into the air stream
- **For outside use only**: for fruit and vegetable growing, viticulture and tree nurseries
- **For applying liquids*, seed, powder and granules**
- **Not suitable for weed control** due to high spray drift rate (cloud spray)

You will find the right **STIHL mistblower** for your needs starting on page 8 onwards.

* Pesticides, plant strengtheners, fertilisers
STIHL manual sprayers come in different kinds. There is a basic hand sprayer for use in the home and garden and backpack sprayers for professional use in greenhouses and on mid-sized crops. All tools in this category boast an ergonomic design and easy operability.

- **Precise treatment of individual plants**
  With the right accessory the spray jet and pressure can be precisely controlled, to help ensure that the chemical is applied on target without harming the plant.

- **Perfect for field crops**
  The professional-level SG 51 and SG 71 backpack sprayers can spread large quantities of pesticides, fertilisers and plant strengtheners.

- **Protect your neighbours and the environment**
  Because the STIHL sprayers expel large droplets, no ‘spray cloud’ is formed. The droplets land on the plant to be treated and not in your neighbour’s garden.

- **One tool, multiple applications**
  Each tool can be made even more versatile with the matching STIHL accessories (extension tubes, pressure valves, various nozzles).

Your STIHL specialist dealer can advise you on specific functions and further accessories. For more information and advice visit [www.stihl.com](http://www.stihl.com)
SG 11
- Ergonomic, easy to use hand-held sprayer
- Uses: house, balcony, patio, garden
- Range of nozzle attachments: comes with a hollow-cone nozzle; other nozzles available as accessories.

SG 31
- Ergonomic sprayer with shoulder strap
- Uses: garden, beds, greenhouses
- All-round use with telescopic tube: even high areas are easy to reach
- Note: sprayer must be placed on the ground for pumping

SG 51
- Backpack sprayer with shoulder strap
- Uses: mid-sized planting areas, greenhouses
- Pressure gauge: full control of the spraying pressure enables precise application
- Flexible pump lever: width and length adjustable, can be attached on either side, no need to place sprayer on the ground when pumping
- 12 litre container: slim design but with fewer stops to refill

SG 71
- Backpack sprayer with shoulder strap and hip belt
- Uses: larger planting areas, greenhouses
- Pressure gauge: full control of the spraying pressure enables precise application
- Flexible pump lever: width and length adjustable, can be attached on either side, no need to place sprayer on the ground when pumping
- 18 litre container: for longer use between refills Perfect for professional use

Container volume: 1.5 l
Weight: 0.46 kg

Container volume: 5.0 l
Weight: 1.8 kg

Container volume: 12.0 l
Weight: 4.5 kg

Container volume: 18.0 l
Weight: 4.8 kg

Note: various nozzles are included.
STIHL mistblowers are efficient and powerful tools for treating larger crops and tall plants, in fruit and vegetable farming, viticulture and tree nurseries. All tools in this category are sturdily constructed and are extremely comfortable to carry and use.

- **Excellent penetration of thick foliage**
  The air stream emitted by these blowers stirs leaves about so that all are treated, even those leaves deep underneath the top layer in bushes and trees.

- **Long-range spraying**
  The powerful long-reaching air stream created by STIHL mistblowers reaches even inaccessible foliage, so you can treat even tall trees, or spray several plants and rows of plants at a time.

- **Secret weapon: the pressure pump**
  The integral pressure pump boosts the quantity of spray directed upward, enabling users to easily treat even medium to tall trees.
