Looking for a keen garden helper? What do you have to do for a perfect lawn? Little or nothing!

And it gets even better: The iMow operates fully automatically and always cuts your lawn to the same height. Once the work is done or the battery needs charging, the iMow will automatically return to the docking station. During mowing, the mulching system shreds the grass cuttings finely, which fall back onto the lawn as a valuable fertiliser. As you can see, the iMow sets new standards in lawn mowing. A perfect lawn is ensured in just a few hours allowing you to enjoy your lawn unhindered. The result is that you have plenty of time for all the things you enjoy doing and for the people you care for. Read on to discover all the benefits of the iMow.

The iMow robotic mower
Fast, intelligent, efficient.
Your iMow is amongst the fastest ...

The efficiency of a robotic mower is extremely important: The shorter the machine is in operation, the longer you can enjoy your lawn unhindered. It is for this reason that we devoted a great deal of attention to this topic. As a result, the iMow performs its task quickly.

... keeping things nice and simple ...

The iMow is more than just a robot, it’s an extremely intelligent one. It’s easy to program and once installation is complete, it just runs and runs and runs – to suit your requirements. You want to make changes to the mowing plan? With the intuitive graphical user interface, programming modifications couldn’t be simpler.

... and is always there when you need it!

Time is a valuable commodity which is why you decide when your iMow does its work. Conveniently program it and let it mow while you’re out or asleep. This means that your lawn is available for you whenever you want to enjoy it. Simple: You enjoy your leisure time and your iMow takes care of the lawn.

The iMow robotic mower
Fast, intelligent, efficient.
Planning is everything. Even when it comes to mowing.

Fast, intelligent, efficient.

[www.viking-imow-planner.com](http://www.viking-imow-planner.com)

If you would like to find out how long it takes for the iMow to cut your lawn, or whether your garden is suitable for iMow use, please visit [www.viking-imow-planner.com](http://www.viking-imow-planner.com)

With our practical online tool, you can quickly make a layout drawing of your garden. The planner will then work out roughly how long your iMow will need to mow the lawn. Your VIKING specialist dealer will be pleased to help you with the installation of your iMow, upon request.
With the bright LCD display and the intuitive user interface, programming couldn’t be simpler. You can also start your machine manually, but only if you want to, of course.

1. The charging contact connects the iMow to the docking station as it loads up with energy.
2. As soon as the iMow touches an obstacle, sensors under its movable hood determine the best direction for circumventing it.
3. The manual Stop button offers added safety.
4. Long grass? Short grass? Using the handy rotary knob, you can comfortably set the cutting height in 15 levels from 20 to 60 mm.
5. Smooth-running wheels with treaded tyres.
6. When necessary, the machine can be comfortably carried via the ergonomically shaped carrying handle.
7. The control panel, which features a bright LCD display, can be removed with ease.
Dynamic mowing plan
Your imow doesn't just mow automatically according to its actual mowing plan, it also decides within a set timeframe (the so-called active time), whether to catch up with an aborted mowing operation at a later date. In the case of a sudden downpour on a summer day, for example, when the rain sensor is active, the imow abandons mowing and catches up the lost time later. In the case of persistent rain, you can switch off the rain sensor or simply leave your imow in the docking station until the next active time begins.

Good neighbourly relations
Your neighbours will also be delighted with your imow: The mowing zone is defined via a perimeter wire, which transmits an interference-free signal. This means that the signal does not compete with other signals, such as those of your neighbour's robotic mower. Avoiding potential conflicts. Pretty intelligent! And because the imow works so quietly, it saves annoying the neighbours through noise.

Always alert!
The imow is equipped with a variety of sensors: As soon as someone attempts to lift the machine or touches it, it stops. Moreover, you can set your imow so that it can only be operated after the entry of a PIN code, rendering theft pointless. So you can be totally relaxed!

Intelligent charging system
Your imow is in a hurry because it has a large area to cover? In that case, it recharges itself faster. Your imow is taking the night off? Then it charges itself up slower and therefore more economically, extending battery life. This saves the environment and your wallet.

Double-sided blade
The robust mulching blade remains sharp for an extremely long time. Every time the blade stops, it automatically changes its rotational direction, ensuring even wear. And when it does have to be replaced, you can do so tool-free. Simple. If not to say: smart.

Dynamic speed
Your imow can automatically distinguish between denser and more sparse grass cover, adapting its travelling speed to suit grass conditions. Really smart, don't you think?

One machine, many benefits.
Read for yourself.
**YOU CHOOSE, iMow**

No two gardens or lawns are alike. Some are big, some small. Some need intensive care, others somewhat less. In order to ensure that a suitable iMow is available for every garden, we simply developed two models.

### As an accessory: iProtect canopy top

In very sunny regions, the optional canopy top provides an effective sunscreen: It protects your iMow from the heat and dirt.

### Docking station

The docking station is the iMow's home. We always place it in a central and protected location in the garden. This allows your iMow to find its way back easily at any time, whether to recharge its batteries or protect itself from inclement weather.

### Installation material

**Included in the standard equipment:**

<table>
<thead>
<tr>

Possible costs of installation are not included in the purchase price.
Can be installed by a specialist dealer in virtually no time.

Only an authorised VIKING specialist dealer can give you the personal advice and professional service that you and your iMow deserve. They perform correct installation, maintenance and repairs, as well as installing replacement parts as required. And they always have time for a chat about your garden and your lawn. Or if you like, about the weather and football as well...

The installation process

Step 1: Your specialist dealer makes a layout plan of the area to be mown according to your instructions.
Step 2: Your specialist dealer lays the perimeter wire.
Step 3: You and your specialist dealer jointly program the mowing plan.
Step 4: Your specialist dealer makes any necessary adjustments.
Step 5: You do whatever you feel like, while – your iMow takes care of the work.
